Production Ready

Your Complete Guide to QA Localization Workflow

January 2025

# Table of Contents

<b>1. Installation</b>	Build and setup
<b>2. Workflows Overview</b>	Weekly vs Daily tasks
<b>3. Weekly Workflow</b>	Generate → Transfer → Build
<b>4. Daily Workflow</b>	Download and organize tester files
<b>5. Main Interface</b>	Understanding the GUI
<b>6. Generate Datasheets</b>	Create LQA worksheets
<b>7. Transfer QA Files</b>	Merge tester work
<b>8. Build Master Files</b>	Compile master documents
<b>9. Folder Structure</b>	Where files go
<b>10. Folder Naming</b>	How to name tester folders
<b>11. Troubleshooting</b>	Common issues

# 1. Installation

---

## Build Your Own Executable

Each user builds their own executable to match their Perforce drive location.

Step	Action
1	<b>Extract</b> the QACompilerNEW.zip to a folder
2	<b>Run</b> build_exe.bat
3	When prompted, <b>enter your drive letter</b> (F, D, E, etc.)
4	Wait for build to complete
5	Find executable in dist\QACompiler\QACompiler.exe

Enter drive letter (F/D/E/etc.) [F]: D

## Why Build Yourself?

- **Different drives:** Perforce can be on F:, D:, E: etc.
- **Correct paths:** Build process configures paths for YOUR system
- **No manual editing:** Drive selection is automatic

## Requirements

Requirement	Details
Python	3.8 or higher
pip	Comes with Python
Perforce	Must be synced to your machine

## 2. Workflows Overview

---

The QA Compiler supports two main workflows:

Workflow	Frequency	Purpose
<b>Weekly (Friday Refresh)</b>	Every Friday	Refresh all datasheets with new game data
<b>Daily</b>	Every day	Process tester submissions

### WEEKLY WORKFLOW (Friday)

**Generate Datasheets → Transfer QA Files → Build Master Files**

### DAILY WORKFLOW

**Download from Redmine → Organize into QAfolderOLD/NEW**

## 3. Weekly Workflow (Friday Refresh)

---

Every Friday, refresh the QA files with the latest game data.

### Step 1: Generate Datasheets

Creates fresh LQA worksheets from game XML data.

Action	Details
Click	<b>[Generate Selected]</b> (or select specific categories)
Output	GeneratedDatasheets/ folder
When	Game data has been updated

### Step 2: Transfer QA Files

Merges tester work from OLD/NEW folders into QAfolder.

Action	Details
Ensure	QAfolderOLD/ and QAfolderNEW/ have tester folders
Click	<b>[Transfer QA Files]</b>
Output	QAfolder/ (combined)

### Step 3: Build Master Files

Compiles everything into final master documents.

Action	Details
Click	<b>[Build Master Files]</b>
Output	Masterfolder_EN/ and Masterfolder_CN/
Includes	Progress tracker ( _TRACKER.xlsx )

## 4. Daily Workflow

---

Every day, collect and organize tester submissions.

### Step 1: Download from Redmine

Testers upload their QA files to Redmine. Download them daily.

Source	What to Download
Redmine	Tester-submitted QA folders
Format	이름_Category folders

### Step 2: Organize into Folders

Folder	What Goes Here
QAfolderOLD/	<b>Previous round</b> - tester's last submitted work
QAfolderNEW/	<b>Current round</b> - tester's new empty datasheets

### Step 3: Run Transfer (When Ready)

Once you have both OLD and NEW files for a category:

1. Click **[Transfer QA Files]**
2. Combined output appears in `QAfolder/`

# 5. QAfolder Behavior (Important!)

The `QAfolder/` is the **master collection** of all QA work.

## Golden Rules

Rule	Explanation
<b>Never delete manually</b>	Files are managed by Transfer process
<b>Only add/edit</b>	New categories get added, existing ones get updated
<b>Auto-updated</b>	Transfer process handles all merging
<b>Keeps history</b>	Completed categories stay until next refresh

## How It Works

```
Before Transfer:  
QAfolder/  
|—— 김민영_Quest/      ← Completed last week, KEEP IT  
|—— 박지훈_Knowledge/   ← Completed last week, KEEP IT  
└—— (empty for new categories)
```

```
After Transfer:  
QAfolder/  
|—— 김민영_Quest/      ← Still there (untouched)  
|—— 박지훈_Knowledge/  ← Still there (untouched)  
|—— 이수진_Item/       ← NEW - just transferred  
└—— 최영희_Region/    ← NEW - just transferred
```

### Why This Matters:

- Completed work is preserved until weekly refresh
- No accidental deletions - Transfer only adds/updates
- Incremental updates - Add new categories as testers finish

# 6. Generate Datasheets

---

**Purpose:** Create fresh LQA worksheets from game XML data.

## Category Guide

Category	Contains	Output
<b>Quest</b>	Main story, faction, daily quests	GameData_Map_All/
<b>Knowledge</b>	Encyclopedia entries	Knowledge_LQA_All/
<b>Item</b>	Items, equipment, consumables	ItemData_Map_All/
<b>Region</b>	Areas, locations, POIs	Region_LQA_v3/
<b>System</b>	UI text, menus	(via Skill+Help merge)
<b>Character</b>	NPCs, monsters	Character_LQA_All/
<b>Skill</b>	Player abilities	Skill_LQA_All/
<b>Help</b>	Tutorial, tips	GameAdvice_LQA_All/
<b>Gimmick</b>	Interactive objects	Gimmick_LQA_Output/

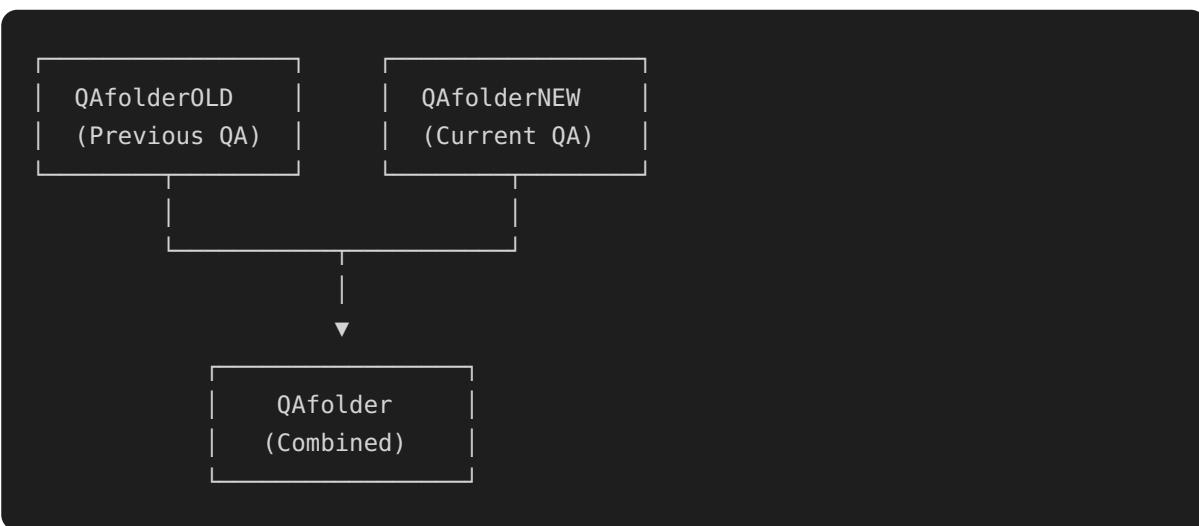

## Tester STATUS Options

Status	Meaning	Color
<b>ISSUE</b>	Problem found - needs fix	Red
<b>NO ISSUE</b>	Checked, looks good	Green
<b>BLOCKED</b>	Cannot test	Yellow
<b>KOREAN</b>	Still in Korean	Orange

## 7. Transfer QA Files

**Purpose:** Merge tester work from OLD/NEW folders into QAfolder.

### The Flow

### How to Use

Step	Action
1	Place OLD tester folders in <code>QAfolderOLD/</code>
2	Place NEW tester folders in <code>QAfolderNEW/</code>
3	Click <b>[Transfer QA Files]</b>
4	Combined output appears in <code>QAfolder/</code>

## 8. Build Master Files

---

**Purpose:** Compile all QA files into master documents with progress tracking.

### Category Merging

Some categories are **merged** into combined master files:

Input Category	Output Master File
Quest	Master_Quest.xlsx
Knowledge	Master_Knowledge.xlsx
Item	Master_Item.xlsx
Region	Master_Region.xlsx
Character	Master_Character.xlsx
<b>Skill</b>	Master_System.xlsx ← merged
<b>Help</b>	Master_System.xlsx ← merged
<b>Gimmick</b>	Master_Item.xlsx ← merged

### Automatic Row Hiding

Rows are automatically hidden based on two status columns:

**TESTER STATUS (TESTER\_STATUS\_{User} - hidden column)**

This is the **tester's original status** from their QA work:

Status	Hidden?	Reason
ISSUE	No	Active issue - needs attention
BLOCKED	Yes	Tester couldn't test
KOREAN	Yes	Still in Korean
NO ISSUE	Yes	No problem found

## MANAGER STATUS (STATUS\_{User} - visible column)

This is the **manager's review status** (dropdown in Master file):

Status	Hidden?	Reason
FIXED	Yes	Issue resolved
NON-ISSUE	Yes	Not actually an issue
REPORTED	No	Reported to dev team
CHECKING	No	Under investigation
(empty)	No	Pending manager review

**Summary:** Only ISSUE rows that haven't been resolved by manager are visible.

## 9. Folder Structure

```
QACompiler/
├── QACompiler.exe           ← Main application
|
├── QAfolderOLD/
|   ├── 김민영_Quest/
|   └── 박지훈_Item/
|
├── QAfolderNEW/             ← Current round tester files
|   ├── 김민영_Quest/
|   └── 박지훈_Item/
|
├── QAfolder/                 ← Combined (auto-generated)
|   ├── 김민영_Quest/
|   └── 박지훈_Item/
|
├── GeneratedDatasheets/     ← From "Generate Datasheets"
|
├── Masterfolder_EN/          ← English master output
|   ├── Master_Quest.xlsx
|   ├── _TRACKER.xlsx
|   └── Images/
|
└── Masterfolder_CN/          ← Chinese master output
```

# 10. Folder Naming Convention

Tester folders must follow this format: 이름\_Category

Format	Example	Explanation
이름_Category	김민영_Quest	Name + underscore + Category

## Valid Examples

Folder Name	Tester	Category
김민영_Quest	김민영	Quest
박지훈_Item	박지훈	Item
이수진_Knowledge	이수진	Knowledge
최영희_Region	최영희	Region
John_Quest	John	Quest

## Valid Categories

Category
Quest
Knowledge
Item
Region
System
Character
Skill
Help
Gimmick

## Rules

Rule	Correct	Wrong
Single underscore	김민영_Quest	김_민_영_Quest
Category at end	김민영_Quest	Quest_김민영
Exact category name	김민영_Quest	김민영_quest

# 11. Troubleshooting

---

## "Generator modules not yet implemented"

**Cause:** Generator files missing or import failed.

**Solution:**

1. Verify all files present
2. Check `generators/` folder exists
3. Re-extract from package

## "No datasheets found in GeneratedDatasheets"

**Cause:** Coverage analysis needs datasheets first.

**Solution:**

1. Run "Generate Datasheets" first
2. Verify files in `GeneratedDatasheets/`
3. Then run Coverage Analysis

## Path errors mentioning wrong drive

**Cause:** Executable built for different drive.

**Solution:**

1. Re-run `build_exe.bat`
2. Enter YOUR drive letter when prompted
3. Use the new executable

## Folder not recognized

**Cause:** Folder name doesn't match `이름_Category` format.

**Solution:**

1. Check folder name format: 김민영\_Quest
2. Verify category is valid (Quest, Item, etc.)
3. Use single underscore only

## **QA Compiler Suite v2.0**

Making localization QA easier, one datasheet at a time.
